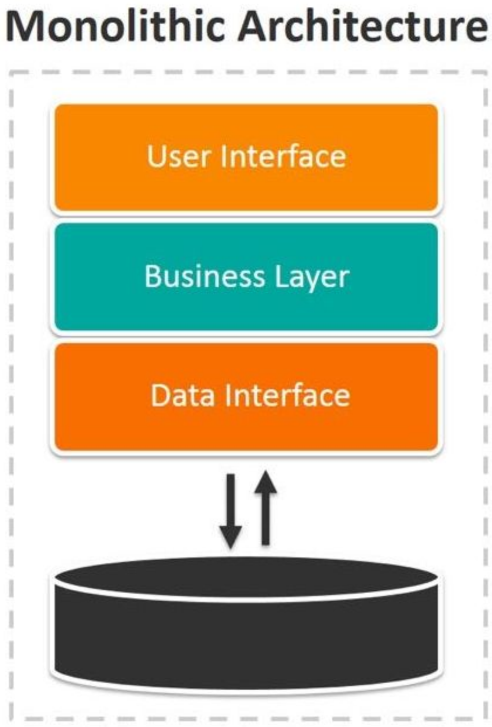
SOLID and hexagonal architecture

Summary



https://www.suse.com/c/rancher_blog/microservices-vs-monolithic-architectures/

1. Thought for object oriented design
2. Group of best practices to guarantee scalability and maintainability of big projects
3. Introduced by Robert C. Martin

- Single responsibility

A class should have one and only one reason to change, meaning that a class should have only one job.

https://www.digitalocean.com/community/conceptual-articles/s-o-l-i-d-the-first-five-principles-of-object-oriented-design

- Opened-closed principle

Objects or entities should be open for extension but closed for modification.

https://www.digitalocean.com/community/conceptual-articles/s-o-l-i-d-the-first-five-principles-of-object-oriented-design

- Liskov substitution principle

Let q(x) be a property provable about objects of x of type T. Then q(y) should be provable for objects y of type S where S is a subtype of T.

https://www.digitalocean.com/community/conceptual-articles/s-o-l-i-d-the-first-five-principles-of-object-oriented-design

- Interface segregation interface

A client should never be forced to implement an interface that it doesn’t use, or clients shouldn’t be forced to depend on methods they do not use.

https://www.digitalocean.com/community/conceptual-articles/s-o-l-i-d-the-first-five-principles-of-object-oriented-design

- Dependency inversion principle

Entities must depend on abstractions, not on concretions. It states that the high-level module must not depend on the low-level module, but they should depend on abstractions.
