# CLOUD

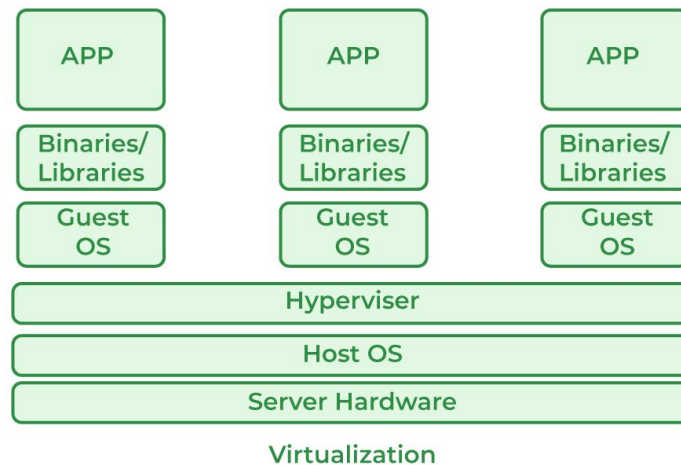

Containerization

1. Motivation
2. Container architecture
3. Docker commands

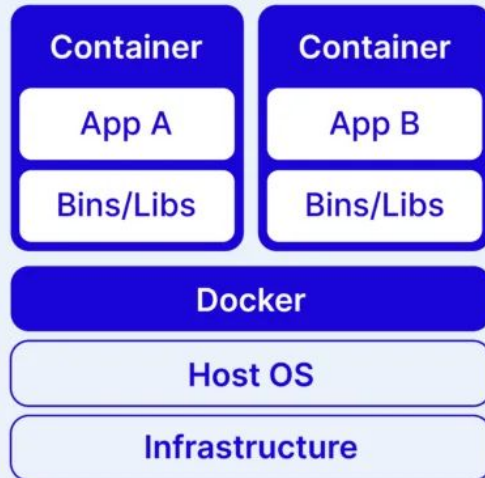

## Key disadvantages

1. Resource overhead
2. Startup Time
3. Scalability and management

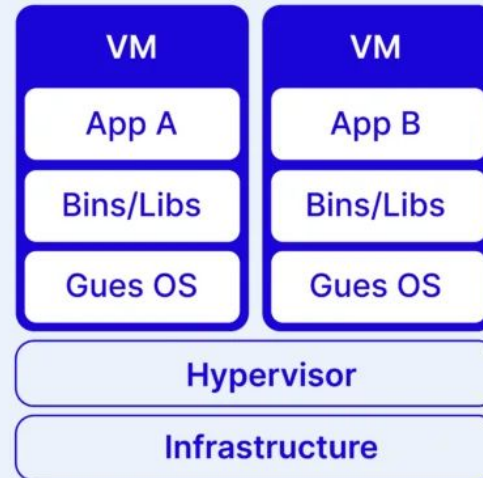

### Container Based Implementation

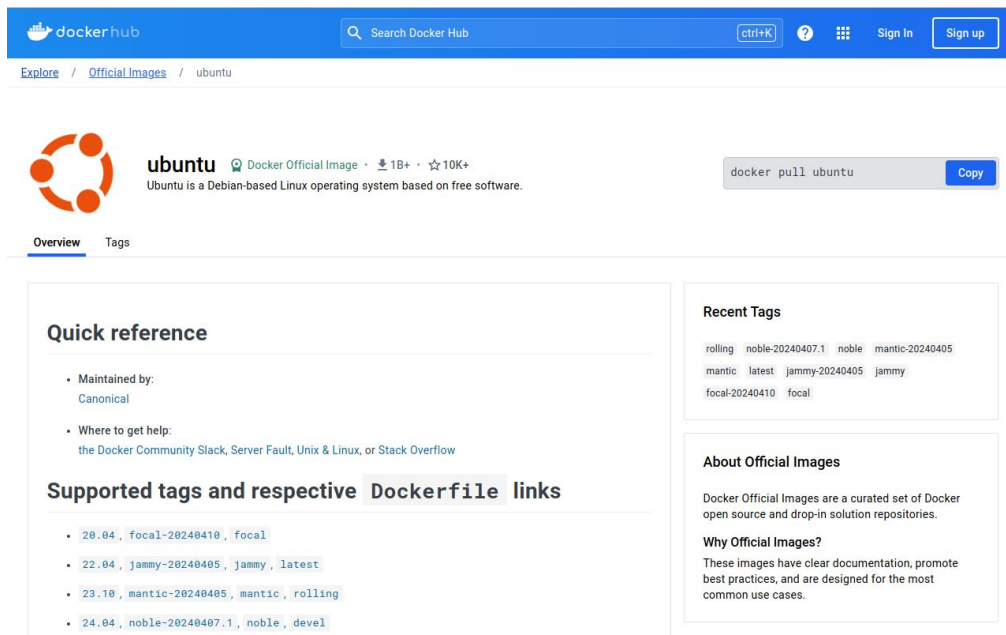

### Virtual Machine Implementation

## Base images

- <https://hub.docker.com/>

The screenshot shows the Docker Hub page for the 'ubuntu' image. The header is blue with the Docker Hub logo, a search bar, and links for 'ctr+K', help, and sign in/sign up. Below the header, the 'ubuntu' image is featured with its logo, 'Docker Official Image' badge, download count (1B+), and star count (10K+). A 'docker pull ubuntu' command is shown with a 'Copy' button. The 'Overview' tab is selected. The 'Quick reference' section lists the maintainer (Canonical) and where to get help. The 'Supported tags and respective Dockerfile links' section lists various tags like '20.04', 'focal-20240410', 'focal', '22.04', 'jammy-20240405', 'jammy', 'latest', '23.10', 'mantic-20240405', 'mantic', 'rolling', '24.04', 'noble-20240407.1', 'noble', and 'devel'. The 'Recent Tags' section shows a list of tags. The 'About Official Images' section explains that these are curated sets of Docker open source and drop-in solution repositories, designed for clear documentation and best practices.

**Quick reference**

- Maintained by:  
Canonical
- Where to get help:  
the Docker Community Slack, Server Fault, Unix & Linux, or Stack Overflow

**Supported tags and respective Dockerfile links**

- 20.04, focal-20240410, focal
- 22.04, jammy-20240405, jammy, latest
- 23.10, mantic-20240405, mantic, rolling
- 24.04, noble-20240407.1, noble, devel

**Recent Tags**

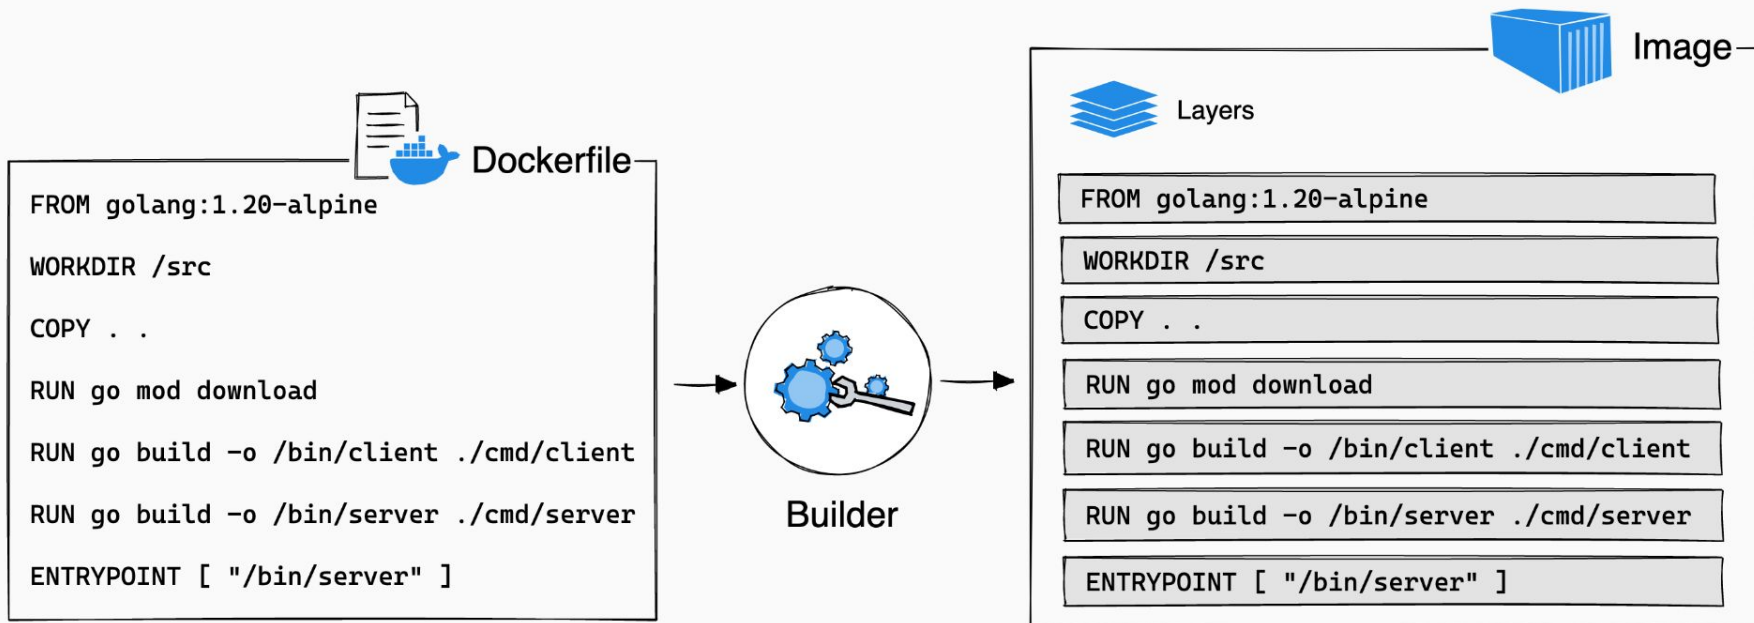

rolling noble-20240407.1 noble mantic-20240405  
mantic latest jammy-20240405 jammy  
focal-20240410 focal

**About Official Images**

Docker Official Images are a curated set of Docker open source and drop-in solution repositories.

**Why Official Images?**

These images have clear documentation, promote best practices, and are designed for the most common use cases.

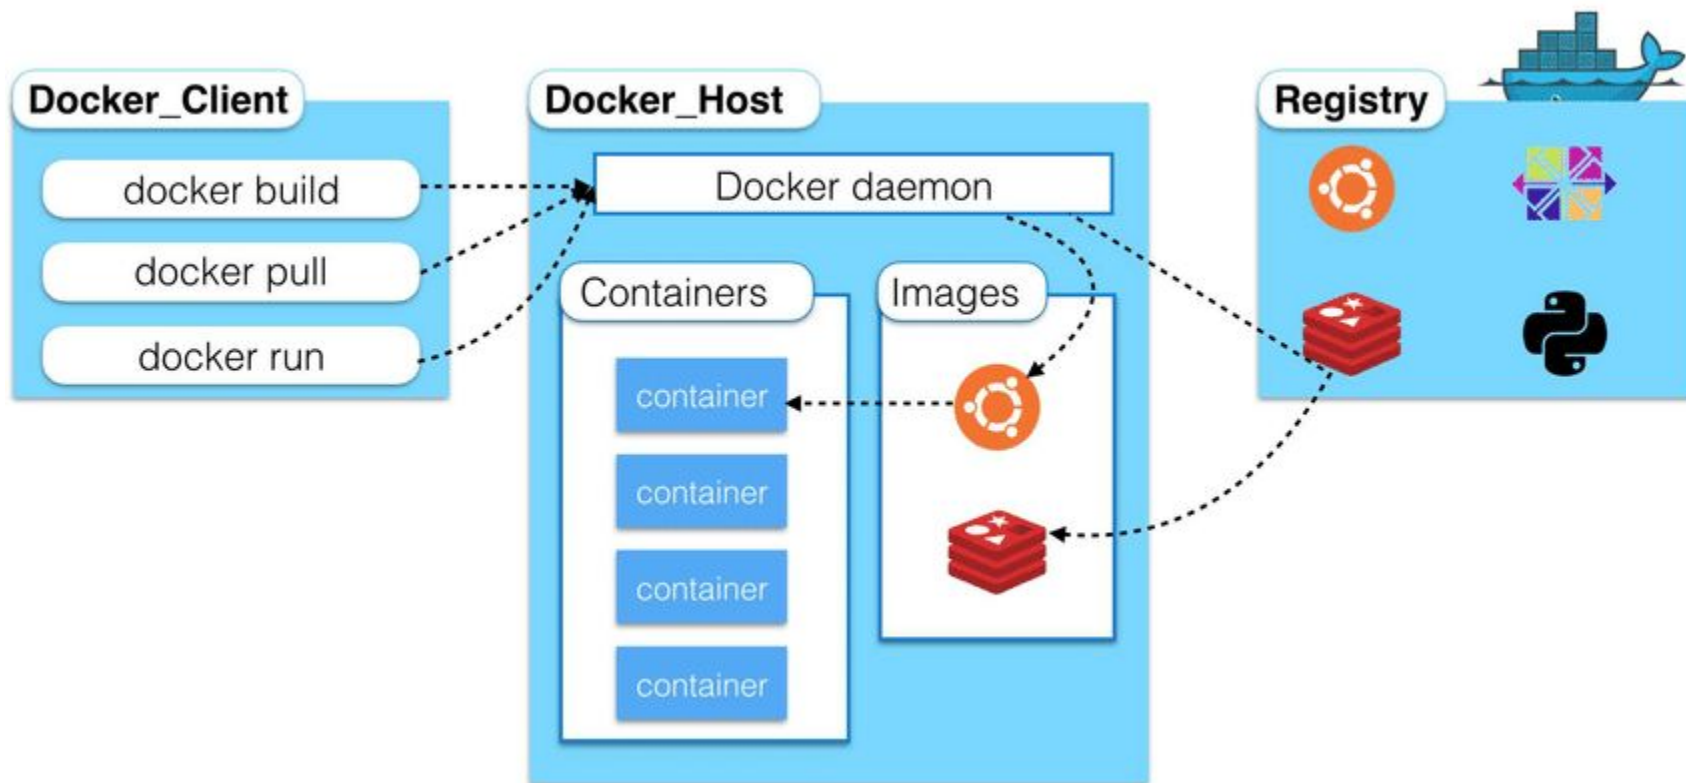

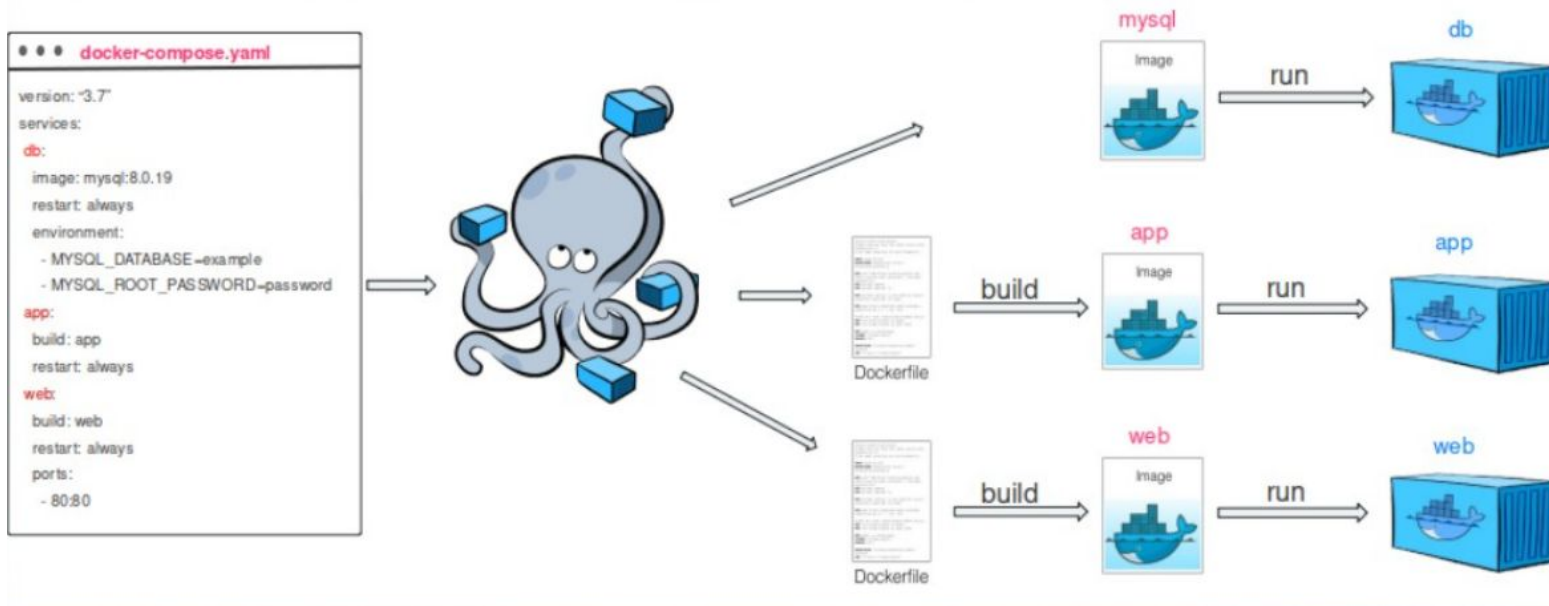

Layers

Cache?

`FROM golang:1.20-alpine``WORKDIR /src``COPY . .``RUN go mod download``RUN go build -o /bin/client ./cmd/client``RUN go build -o /bin/server ./cmd/server``ENTRYPOINT [ "/bin/server" ]`

- Docker
  - `docker ps`
  - `docker images`
  - `docker build`
  - `docker run`
  - `docker pull`
  - `docker push`

- Docker compose
  - `docker compose up -d`
  - `docker compose down`
  - `docker compose exec`
  - `docker compose run`
